## **1.606 2016-02-22**

- Completed HR translation. ES, IT and HR are now completed.
- Minor fixes (GH #39, #40, #41)
- Adjusted js to work around bootstrap fixed topbar positioning
- Fixed BB bug with partials and quotas (GH #38)

## **1.605 2016-02-09**

- Removed the cache for the listing. Optimized sql to compensate.
- Simplified the logger code.
- Optimized the static index generator to speed-up publishing.

## **1.604 2016-02-02**

- Added some documentation

## **1.603 2016-02-01**

- Minor bugfixes (triggered by different setups)

## **1.602 2016-01-31**

- Added option to the admin for highlight.js configuration (select the languages you are interested in).
- Fix to avoid jobber's crash when the db connection goes away in the wrong moment.

## **1.601 2016-01-22**

- Optimization for sorting of titles and categories

## **1.60 2016-01-22**

- Bookbuilder new feature: partial texts (#14)
- Automated installer (#29)
- Added javascript code highlighter (#1)
- Moved cgit refreshing to module and trigger it on conf changes
- Fixed BB crash when reusing setup with a cover (#30)
- Fixed missing Xapian purging on deletion by git removal (#31)
- Added delete button and code for category descriptions (#32)

- Hold the webservice configuration in a model
- Added let's encrypt support via simp\_le
- Bookbuilder new feature: running headers
- Bookbuilder new feature: cropmarks
- Bookbuilder new feature: custom paper size
- New imposition schemas in the Bookbuilder
- Daemon optimization with fork to keep the memory low
- Prepared sources for debian packaging
