

**Version 2.0**

Version 2.0  
2017-10-27

**amusewiki.org**

2017-10-27

## Version 1.993 (2016-11-14)

- Add a rebuild action, both for a single text or the whole site (#87)
- Add metadata to PDF #86

Newly generated PDF will have the metadata included in the file. If you want to rebuild all the existing, you can do so logging in as administrator and visiting `/tasks/rebuild`.

## Version 1.992 (2016-11-05)

- [SECURITY FIX] Fixed directory traversal on `/git` urls which discloses potentially private sites. Only sites with `CGIT >= 0.11` are affected. Older versions (notably the one packaged by `debian`) are not affected.

## Version 1.991 (2016-11-02)

- Upgraded I18N files (it and hr)

## Version 1.990 (2016-11-01)

- Implement authorization without redirect #67
- Permit customization of fonts (globally and per site) #57
- Replaced font-awesome with glyphicons
- Added customization for edit screen

The "webfonts" directory is now obsoleted and can be removed. It's been replaced by the `fontspec.json` file which should have been created automatically on restart.

This release is a public beta (but production ready) for AmuseWiki 2.0.

Version 1.990 (2016-11-01) . . . . .	10

- Support for <verbatim> tag to avoid the markup to be interpreted.
- Reduce the cropmark offset to 1mm (using new PDF::Imposition release)

### **Version 2.010 (2017-02-04)**

- Show the git history to logged in even if hidden for anon (#94)
- Define, show and handle custom formats (#92)
- Fix mixed content on /user/edit (#93)

### **Version 2.001 (2017-01-20)**

- Fixed pagination problems when there are lots of texts with the same pubdate.

### **Version 2.000 (2016-12-19)**

- No code changes, promoted to version 2.0
- Translations update
- Documentation improvement (#91)

### **Version 1.995 (2016-11-25)**

- debian packages now get dbconfig-common support (#88)
- fix eta for bulk jobs
- make images accessible from any path (#89)

- Fix failure on bookbuilder with cropmarks and "generic" paper-size
- Added a way to add captions to attached PDFs
- Improved handling of thumbnails
- Improved formatting of galleries (pages with multiple PDFs)
- Added option to show the previews when the texts are still deferred
- Routes for job status and download are now more strict and will not serve anything if the job belongs to an user.
- Added json route to serve the raw headers of the muse file
- Improved category text listing with widget for sorting/page size

### **Version 2.014 (2017-04-18)**

- Add a flag icon when there is an internal anchor
- Support for hidden toc #notoc

### **Version 2.012 (2017-03-26)**

- Use thumbnails for listing (#102)
- Add option to insert the image at the end of the body (#101)
- Embed PDFs by splitting them in images (#101)
- Improved PDF attachment layout (#100)

### **Version 2.011 (2017-03-12)**

- Improved handling of git pull jobs, which is now a bulk job and will not block the jobber longer than the time needed to compile a single text.

The 2.0 series does not bring any incompatibility or upgrade issues from the 1.x series.

### **Version 2.032 (2017-10-27)**

- Add opengraph support (#150)
- Prevent chrome to complain for XSS when we supposedly know what we are doing (#151)

### **Version 2.031 (2017-10-14)**

- Provides /mirror, suitable for wget -m. Please note that the route is accessible if /git is enable as well (as both expose the repo tree). Of course private sites don't expose them to anonymous users. (#144)
- Provide /listing, replacement for /library as title listing and use it in the navbars, providing sorting and pagination. (#142)
- Add text details to search result (#142)

### **Version 2.030 (2017-10-08)**

- Updated and corrected I18N strings
- Completed i18n for it and hr

### **Version 2.029 (2017-10-07)**

- Offer a ToC preview on listing (opt-in) (#130)
- Register UI language per user and set it at login (#137)
- Accurate (as much as possible) page count in bookbuilder and listing

This upgrade carries a two step DB upgrade (automatically managed)

## Version 2.028 (2017-09-30)

- Fix sticky teaser field in the db on line removal (minor bugfix)
- Defer the generation of the static indexes to a low priority job (#134)
- At startup, check if the fontspec.json files are good (#133)

## Version 2.027 (2017-09-29)

- Added option to create automatic teasers (opt-in)
- Optimize all PNG images (thanks @labdsf)

## Version 2.026 (2017-09-26)

- Escape some invisible chars when doing the diff (#124)
- Bump dependency on Text::Amuse with syntax improvements (lists obeying indexes and footnotes spanning more paragraphs)
- I18N: added ru strings (thanks @labdsf)
- Improved site exporting
- Improved static generation (which now is localized and styled and comes with some buttons for sorting).

## Version 2.025 (2017-08-20)

- Add Cormorant Garamond fonts as dependency (packaged)
- Bumped Text::Amuse::Compile dependency with improved CSS
- Remove font-size option from EPUB definition

## Version 2.024 (2017-07-29)

- Add backlinks feature (#118)
- Improve error handling for the new text form (#119)
- Add option to turn links without description to vimeo/youtube/gmaps into widgets
- Fix conditional nocoverpage feature broken since 2.014 (#121)

## Version 2.023 (2017-06-15)

- Add documentation for installation on CentOS
- Fixes to installation scripts
- Add nofinalpage option to BB and custom formats (#117)

## Version 2.022 (2017-05-23)

- Do not show deferred titles without a teaser if the option for that feature is enabled.

## Version 2.021 (2017-05-21)

- Add full screen editor to editing page
- Add an opt-in ordering by sku in the category pages

## Version 2.020 (2017-05-17)

- [SECURITY FIX] Fix potential HTML injection when external images are enabled. This is a real security issue if it's an openwiki and if the option is enabled.
- Fix stemming when searching on multilanguage sites
- Fix debian packages with missing dependencies
