Overview

Introducing nodes

The development for Amusewiki 2.4 started in the late spring 2019 developing a new feature, the "nodes", to overcome the limitation of the single level author/topic structure and to gain the ability to build arbitrary trees of texts.

Sometimes this approach can be better than having the category hardcoded into the text, but it's your choice. You can use this or the classical system, or both.

The feature is still marked as experimental, but it can be accessed under /node

A quick demo would probably give you a better idea of what is about.

Site Map

Create

URI (only lowercase ASCII and hyphens)

geography

Parent node

Root node

Create

Create the initial node

English

Title

Geography

Body

H1 H2 H3 H4 H5 / B    

This node talks about geography and will have regions as children.

Español

Title

Body

H1 H2 H3 H4 H5 / B    

Add a title and an optional body, and attach texts

Site Map

Create

URI (only lowercase ASCII and hyphens)

Parent node

Create

Overview of the tree, you can add a child node

News

This is the homepage for [amusewiki](#), a library-oriented wiki engine. Amusewiki is more than just a wiki engine, it's also a powerful authoring, archiving and publishing platform.

Amusewiki is 100% free software. You can download it at [github](#) (make sure to follow the [installation instructions](#)) or save time, energy and troubles and install it on Debian/Ubuntu with the (unofficial) packages provided at [packages.amusewiki.org](#), which are regularly updated at each release.

If you need help, you're welcome to drop to the [IRC channel](#).

This site runs on amusewiki itself. If you want to try out the editing and publishing process, you can use the [sandbox](#)

.....

An attached text will carry the breadcrumbs

Create

URI (only lowercase ASCII and hyphens)

The updated sitemap

Geography

This node talks about geography and will have regions as children.

News

The Text::Amuse markup manual

Europe

The node page with texts and children nodes

Desired URI (automatically generated if not present, using author and title)

An URI is a string which uniquely identifies the text in the archive. In theory, it could be anything, but if you want to set it yourself, please stick with the convention: author name, title, language, eventual number for disambiguation, e.g. errico-malatesta-anarchy-2. Please note that this is normally not needed

Publication date on this site

Leave it blank if you want it published right away. Set a date in the future if you want it deferred.

Keep in mind that I'm cleaning the text and give it back to you in the markup used on this site. It's up to you to check it and finally upload it. Some rarely used markup will be lost in the process. Please check the preview on the next step, where you can also insert images.

Create

Assign text to nodes

Geography

Geography / Europe

When adding a text, you can attach it to a node right away

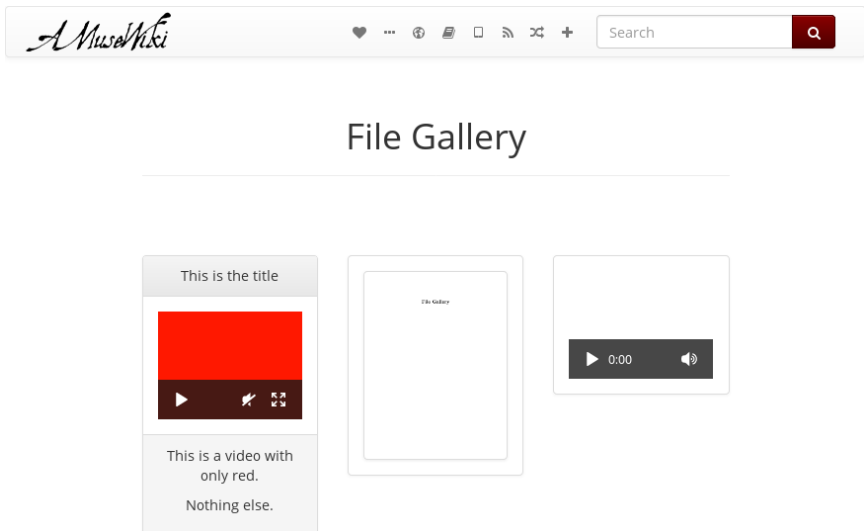

Binary uploads

The support for attached files has been extended. You can now upload audio and video files (you will probably need to tweak the max upload size in the admin) and create pages to display them without the infobox.

Example source:

```
#ATTACH t-t-test-1.webm t-t-test-2.pdf t-t-test-4.mp3 t-t-test-3
#title File Gallery
#blob 1
```

Resulting in such page:

Express publishing

A new option has been added in the admin, "Speed up the publishing process", which will skip the revision page if you have the permission to publish and there are no conflicts. Also when the publishing is complete, you will be redirected automatically to the target page.

This makes sense if you are the only one working on the site and the publishing procedure seems too long and kind of gratuitous (it's not, really!) to you.

Let's Encrypt

The version 1 of the ACME protocol is going away soon, so Amusewiki is now using the version 2, thanks to Net::ACME2. Unofficial Debian packages are available for Stretch and Buster at packages.amusewiki.org

Changes

2.392 2019-08-23

- Upgraded HR and IT localization

2.391 2019-08-15

- Migrate from Protocol : : ACME to Net : : ACME2 to get Let's Encrypt certificate using the new protocol, given that the old one is getting sinked soon.
- New site option: `express_publishing`. If in effect, the publishing procedure is speeded up and if no conflict is found, the text will be published right away. This is useful if there are no external contributions.
- Add List-Id to our mails, so clients have a chance to pick it up.
- Support per-format template files via newest `Text::Amuse::Compile`

2.390 2019-07-25

- Added experimental node system. It's accessible to logged in users under `/node`. The basic functionality is there. Probably needs refinement with locale-aware sorting. This permits to create arbitrary category trees.
- Added experimental feature for adding binary files like video/audio. Available in the configuration panel.
