

Bug with French and XeLaTeX

The polyglossia package shipped with Debian 9 (current stable) is hit by this bug: tex.stackexchange.com (missing no-break spaces in French punctuation).

You can work around it in two ways:

- Use LuaTeX instead of XeTeX (root users have access to the switch in the admin).
- Patch polyglossia (see below).

Patching polyglossia

This is experimental but appears to work:

Copy the file 'gloss-french.ldf' into the local tree.

```
# amusewiki shell
$ mkdir -p texmf/tex/latex/polyglossia
$ cp /usr/share/texlive/texmf-dist/tex/latex/polyglossia/gloss-french.1
    texmf/tex/latex/polyglossia/gloss-french.ldf
$ texhash `kpsewhich -var-value TEXMFHOME`
```

And patch the new gloss-french.ldf with this:

```
--- /usr/share/texlive/texmf-dist/tex/latex/polyglossia/gloss-french.1
+++ texmf/tex/latex/polyglossia/gloss-french.ldf      2018-10-14 09:4
