Translating the interface

amusewiki.org

Translating the interface (for translators/non-tech)

1. Install Poedit.
2. Go to <https://github.com/melmothx/amusewiki/releases> and download the **latest**. Unpack the archive and find the .po file with your language code in the `lib/AmuseWikiFarm/I18N` directory.
3. Open the .po file with Poedit. Add the translations. Please preserve the %1, %2, in the message. They are placeholders for dynamic content. Save (of course). Send the .po file to melmothx (at) gmail (dot) com.

Done.

When a new release comes out, repeat from point 2 (unless you uninstalled Poedit in the meanwhile).

Technical details (for developers)

See `LOCALIZATION.txt` in the root of the distribution.

This document also contains the procedure if you want to override the translation on a per-site basis.

Enabling the language in the admin interface

Go to `/admin/sites`, edit, set the Locale and/or add the code to the Multilanguage setting.
